

## Vista Users Installation Guide

Before downloading TASS on Vista: Open your documents folder and create a new file folder named TASS.

1. Go to [www.tass-software.com](http://www.tass-software.com) and click on “Request Free Trial” – “Download Free Trial”. Click on **SAVE** and save to your desktop. Once TASS setup has downloaded to your desktop, click on the **SETUP** icon on your desktop. Follow the on screen instructions in Installshield. You will receive an error message stating that file cannot be saved in path specified. **CLICK OK.**
2. Navigate to the previously created TASS file folder in your documents folder and click **OK.**
3. Follow the on screen instructions to install TASS.
4. Once TASS has been installed, open your program files folder from the “C” drive and click on the maximize icon to reduce the size of the program files window. Now open your documents folder and go to the TASS folder. You should reduce this window as well so that you can see both the program files and documents windows at once. Drag the TASS folder into the program files window.
5. If a TASS icon was not automatically placed on your desktop, right click on the TASS gavel icon in your TASS folder and click on “Create Shortcut” then drag the newly created shortcut to your desktop. You are now setup to use TASS on Vista. For networking instructions, download the networking pdf file on [tass-software.com](http://tass-software.com).
